

Copilot Prompt Handout — Session 3

From Draft to Deliverable — Notebooks, Word & PowerPoint

Audience: Copilot licensed users. Demo files referenced (Project Atlas and its session-pack files) are fictional and provided in the session pack.

How to use this handout

- Use these prompts during or after the session to practise the Notebook → Word → PowerPoint loop. Each is grouped by use case so you can quickly find a starting point.
- Copy a prompt as-is, then adapt the names and details to your own engagement.
- Add business context when you want a sharper answer (role, audience, what “good” looks like).
- Always validate facts, figures and wording before you share — Copilot drafts, you decide.
- Some of the demo reference files can be downloaded – some may be too big and not available

 - <https://github.com/ZePowerdiver/Session-Decks/blob/master/Pepsi%20Cola%20AUS.docx>

Tip: stronger prompts usually include a goal, context, a source, the output you expect, and a request to validate.

Choosing a prompt by pace — most demos below give a few options. **A · Quick** (short on time) lands the point in one shot. **B · Standard** is the core demo. **C · Interactive** is multi-part — shape the inputs, refine, and compare.

1. Start with a sharp prompt

A great prompt makes a great deliverable. The same four parts work in a Notebook, in Word, and in PowerPoint.

Goal	What you want, and in what format (a 1-page update, a RAID table, a 3-slide outline).
Context	Who it is for and any background (audience, tone, what “good” looks like).
Source	Which files or data Copilot should use (your Notebook, a named .docx, the open deck).
Expectations	Length, tone, and what to do if unsure — ask, don’t guess; quote figures exactly.

2. Ring-fence with a Notebook

One Notebook per engagement. Only what you add is in scope — the Notebook is the perimeter, and Copilot only sees what you put in front of it.

Create a Notebook for the engagement, add 3–5 sources (charter, interview notes, prior deck, a memo), then synthesise across them on a Page.

Synthesise — one-page situation summary

Based on the sources I've added, give me a 1-page situation summary I can share with the engagement partner. Group the content into: scope, risks, timeline, dependencies.

Surface — open questions for the steering committee

What are the open questions I still need to answer for the steering committee? Cite which source raises each one.

Organise — a Page by workflow

Generate a Page that organises the source content by workflow, with a short status line for each.

Share with care

A Notebook is a collaborative space, not a personal scratchpad. Sharing follows the same M365 permissions model as the rest of your content — it never widens access.

Before I share this Notebook, list the sources it contains and confirm it only draws on content my engagement team can already access.

3. Build with Word

The longest loop — most “blank page” moments live here. Same Word file, five different jobs: draft, refine, restructure, compare, summarise.

Step 1 · Draft from your Notebook content

Draft a 2-page steering committee update for Project Atlas, using the situation summary from my Notebook. Tone: executive, neutral, confident. Length: under 600 words. Include: progress, risks, decisions needed, next steps. Ask me clarifying questions before finalising.

Step 2 · Refine for tone and precision

Rewrite the Risks section to be more precise and to remove hedging language. Keep the structure, just tighten the wording.

Try these variations

- Make the Executive Summary one-page maximum, executive tone, plain English.
- Tighten this paragraph by 30% without losing the key facts.

Step 3 · Restructure — turn text into a table

Convert the Workflow Status paragraph into a table with: Workflow | RAID | Lead | Next Milestone | Date.

Try these variations

- Turn this list of decisions into a decision log: Date | Decision | Owner | Status.
- Summarise the meeting notes into a structured action log.

- Reorganise this section by stakeholder, not chronologically.

Step 4 · Compare against a reference (RFP / proposal)

This is where false negatives matter most — read the source before you rely on a “not addressed”.

Compare this draft against /Project_Atlas_RFP.docx. Tell me: which client requirements are fully addressed, which are partially addressed (and what’s missing), which are not addressed at all. Suggest a paragraph to fill each gap.

Step 5 · Summarise a long document

Summarise /Client_Strategy_Memo.docx: - One-paragraph summary - 5 key points as bullets - Anything I should validate before quoting it back to the client

Try these variations

- Pull out the 3 implications for our engagement and 2 risks I should flag.
- Extract every commitment, deadline, and named owner.
- Flag anything in the doc that contradicts our current proposal.
- Convert the summary into a slide outline I can drop into PowerPoint.

4. Bring it to PowerPoint

Turn the Word deliverable into a story your audience can follow. Expect a strong first draft to finish quickly — not a final, brand-approved deck.

Good to know Copilot can apply a template you supply, but template approval and brand governance is a separate process. Always confirm the template is the current approved version, and route client-facing decks through the usual review.

Step 1 · Generate the deck from the Word draft

Create a presentation based on /Project_Atlas_Steering_Update.docx. Use /Deloitte_Standard_Template_Illustrative.pptx for formatting.

Or apply a template’s look and feel to a deck you already have:

Review this current deck, and apply the template guidelines and look and feel of the attached file.

Step 2 · Add a slide

Add a new slide summarising the top 3 risks for Project Atlas. Each risk: one-line description, mitigation, owner.

Step 3 · Rewrite a slide

Rewrite the Phase 2 slide to make the bullets sharper and the action clearer.

Step 4 · Reorganise into a storyline

Reorganize the deck into clear sections with section heading slides – Executive Summary, Progress, Risks, Decisions Needed, Next Steps.

Working from an existing deck? Clean it up

Try these variations

- Tighten the bullets on every slide in this deck and remove duplicate content. Keep the existing layouts.
- Reapply the master layouts to slides 4–9 where the alignment has drifted.

5. Validate before you sign off

Carry the discipline from Sessions 1 & 2: Accuracy · Appropriateness · Attributable. Use this at least twice — once after the Notebook synthesis, once after the RFP compare.

Validate your last answer using these checks: 1) Accuracy – list the key claims and which source they came from 2) Appropriateness – flag anything risky for client delivery 3) Attributable – what should I edit before putting my name on this. Then propose a safer version I can share.

6. Three prompts to reuse this week

Pick one. Use it on a real deliverable this week — that's how the habit forms.

Notebook

Synthesise these sources into a 1-page situation summary for [audience].

Word

Draft a [deliverable] using the Notebook content. [Tone] tone, under [N] words. Include [sections].

PowerPoint

Create a presentation from /[Word doc].docx using /[Template].pptx. Then organise it into sections.
